- Behavioural activation
- Monitoring moods
- Maintaining gains and staying well

.....
About the program

This program provides a structured application of proven Cognitive Behavioural Therapy processes. It contains focused cognitive restructuring activities that are known to help manage mood disorders and lessen the severity and duration of episodes. The behavioural component of this course assists with helping people re-engage with living in helpful ways. Participants also learn how to track and monitor mood fluctuations to help gain insight and control over their illness.

.....
